Mohan Naga Sai Kolli

Application & AI Security Engineer | VAPT | AI Red Teaming | DevSecOps | Cloud Security | Security Automation

Gurugram, India | 60 days' notice +91-9515866619 mohankolli9999@gmail.com linkedin.com/in/mohankolli9999
github.com/mohankolli9999

Work Experience

Deutsche Telekom Digital Labs **Aug 2024 - Present**

Associate Security Engineer *Gurugram, India*

- Led full VAPT (SAST, DAST, API, manual) on an internal product, confirming SQL Injection with full database extraction, cross-tenant Broken Object Level Authorization (BOLA), a public Keycloak admin console and leaked API keys; drove remediation to ~85% critical-risk reduction.
- Built and shipped production AI/LLM security automation (Nessus MCP server, QATA) in Python and TypeScript, auto-classifying scanner findings - 1,000+ findings/cycle at 40%+ less analyst effort.
- Performed AI red teaming of LLM applications (prompt injection, jailbreak, tool-use abuse) mapped to the OWASP LLM Top 10 and MITRE ATLAS, and engineered guardrails (least-privilege tool access, prompt-injection defenses).
- Drove DevSecOps on the GitLab CI/CD migration: daily SAST/secret triage, pipeline-blocking secret detection, and Checkmarx SAST/SCA tuning that cut false positives 60%+.
- Assessed AWS cloud security posture (EC2, IAM, Security Groups, VPC) via CSPM, turning misconfigurations into prioritized, SLA-tracked remediation.
- Triaged findings across 15+ applications with CVSS-based business-impact analysis, and ran 10+ Privacy & Security Assessments producing ISO 27001 / NIST / GDPR-aligned audit evidence.

Projects

Themis - Agentic AI Triage Engine | ***Python, AWS Bedrock (Claude)*** **Aug - Sep 2026**

- Built an agentic LLM engine ranking GitLab SAST, dependency, container and secret findings, with read-only repo tools and prompt-injection defenses; validated on a real 15,127-finding export across 51 projects, 139 automated tests passing.

Nessus Vulnerability Triage MCP Server | ***TypeScript, Node.js, Docker*** **Aug 2024 - Present**

- Built and Dockerized a production Model Context Protocol server (~1,000 LOC, Claude Desktop-integrated) automating true/false-positive classification for Nessus - 50-60% triage-time reduction, 1,000+ findings/cycle in production.

Malware Detection using Ensemble Learning | ***Co-authored research***

- Ensemble machine-learning model for malware detection reaching 98.5% classification accuracy vs a 75% baseline on the evaluation dataset.

Technical Skills

Application & API Security: VAPT, web & API penetration testing, manual exploitation (SQLi, BOLA, BFLA), secure code review, OWASP Top 10
AI Security: AI red teaming, prompt injection & jailbreak testing, OWASP LLM Top 10, MITRE ATLAS, MCP server security, agentic AI hardening, prompt-injection defenses
DevSecOps: GitLab CI/CD, SAST/DAST/SCA (Checkmarx), secrets detection, secure SDLC
Cloud & Container Security: AWS (EC2, IAM, Security Groups, VPC, STS), CSPM, Docker
Vulnerability Management: Nessus, Qualys, Checkmarx, ION CSPM, CVE/CVSS, risk prioritization, VM-tool API integration
Governance & Compliance: ISO 27001, NIST, GDPR, DPDPA, audit evidence
Programming & Tools: Python, Bash, TypeScript, Node.js, SQL; Burp Suite, Nmap, Wireshark, Metabase, Jira

Education

NIIT University **India**

B.Tech, Cybersecurity *2020 - 2024*

Certifications

CEHv12 Trainee

Burp Suite Certification: Beginner to Advanced

Nullcon Workshop - Reverse Engineering and Binary Exploitation
